## **DETAILED ACTION**

### ***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: In response to the final Office action dated April 8, 2008, and further to the amendments filed May 21, 2008, applicant's request for reconsideration of the claimed invention, in view of the amendments and remarks have been reviewed and respectfully considered.

According to applicant's response claims 1-10, in which, previously rejected are currently cancelled. Claims 11 through 24 are currently pending in the application.

Examiner had previously indicated that claims (11-24) were allowed in the last final Office action. Since all previously rejected claims (i.e., 1-10) are cancelled by applicant's amendment, the remaining previously allowed claims 11-24 are pending, and therefore, those claims (11-24) are allowed for the reasons given below:

Claims 11 through 17, are allowed for the reason the prior art searched and of record neither anticipates nor suggests a method of determining whether a printed-image-under examination (PIUE) is a original printed image, with a fragile watermark the method comprising: scanning the PIUE to generate scanned image data, the scanned image data comprising pixel data, the pixel data comprising gray scale values and representing the PIUE as a set of scanning pixels; forming a plurality of data blocks from the scanned image data, each data block consisting of pixel data which

corresponds to a respective region of the PIUE; determining for each of the data blocks an average value of the pixel data in the data block; determining for each of the data blocks an index value based on the average value of the pixel data in the data block; for each data block, calculating a difference between the index value for the data block and a value that represents a target value for a corresponding block of pixel data that was used to generate the original printed image, and determining whether the PIUE is the original printer images with the fragile watermark.

Claims 18 through 24, are also allowed for the reason the prior art searched and of record neither anticipates nor suggests a method of determining whether a printed-image-under-examination (PIUE) is a original printed image, with a fragile watermark the method comprising: scanning the PIUE to generate scanned image data, the scanned image data comprising pixel data, the pixel data comprising gray scale values and representing the PIUE as a set of scanning pixels; forming a plurality of data blocks from the scanned image data, each data block consisting of pixel data which corresponds to a respective region of the PIUE; determining for each of the data blocks an average value of the pixel data in the data block; determining for each of the data blocks an index value based on the average value of the pixel data in the data block; for each data block, calculating a difference between the index value for the data block and an expected value of the index value; and determining whether the PIUE is the original printed image with the fragile watermark.

Therefore, independent claims 11 and 18, including all dependent claims depend on there form are also allowed for the reason the prior art searched and of record neither anticipates nor suggests the claimed invention as amended.
